Scope of Practice Overview

CCMC developed the Scope of Practice for Case Managers as a representation of professional opinions regarding what constitutes appropriate delivery of effective case management services. Some clarifying points follow:

- Case management is an advanced practice of an already established professional identity. As such, each case manager's professional scope of practice applies. The scope of practice for case management includes:
  - Each case manager's professional scope of practice.
  - Their employer's governance of policies and procedures.
- Case managers are expected to operate within their individual scope of practice.
- It is considered unethical for case managers to operate outside individual scope of practice limits.
